

# YP96 Series Molding Hydraulic Press

## ✧ What is molding hydraulic press?

YP96 Servo auto trim hydraulic press is mainly used in the molding technology of automobile industry, like headover, carpet, seat, trunk, and fender and so on. Long holding time is its biggest feature. PENGDA provides servo hydraulic press which runs steadily, saves energy, improves efficient and maximizes the benefits of clients.

## ✧ Main features

- Hydraulic unit and electrical cabinet is on the top platform to save the workshop space.
- Multiple safety protection measures to ensure the safety of operators
- The servo system can save energy by 50~80%
- No oil leakage, full card sleeve joint and SAE flange connection.
- Simple and easy to operate touch screen display and control
- Reduce downtime, 24-hour continuous operation rate of more than 98%

## ✧ Parameters

Pressure	Ton	150	200	250	300	400
Daylight	Mm	1400	1600	1600	1800	1800
Stroke	Mm	1200	1400	1400	1600	1600
Table sizes	Mm	2400×1500	2400×1500	2600×1800	2600×1800	2800×2000
Fast down speed	Mm/s	300	300	300	300	300
Pressing speed	Mm/s	10-30	10-30	10-30	10-30	10-30
Fast return speed	Mm/s	150	150	150	150	150
Power	kW	≈20	≈23	≈23	≈29	≈44
